Data Structures & Algorithms

Database Management

Tools

Git, Testing, Code Reviews

LANGUAGES

Arabic — Native

English — Fluent

PROFILE

Frontend developer and IT student with hands-on experience building responsive, multilingual web and mobile interfaces in React and Flutter. Comfortable working across the stack with Django, with solid skills in REST API integration, state management, Clean Architecture, and testing, backed by a teaching role that reinforces Computer Science fundamentals.

WORK EXPERIENCE

Frontend Developer

2024 – Present

Client & freelance web/app projects · Damascus, Syria

Mazen Daadoush Trading Company — Web Platform

- Built a responsive, multilingual (Arabic/English) website for a leading Damascus supplier of pumps and generators, with dynamic product, news, and blog pages and interactive sliders.
- Built a full-featured admin dashboard for real-time content management and integrated secure REST APIs with token authentication and interceptors.

Zeera Medical Cosmetics — Web App

- Delivered a dynamic, multilingual, responsive product showcase for a top regional medical cosmetics brand.
- Implemented multi-level categories, per-product detail pages, similar-product filtering, search, and custom animations using Provider for state management and real-time API integration.

Nike E-Commerce App (Mockup)

- Built a functional front-end e-commerce app with a product home page, working shopping cart, and core shopping workflows using Provider for state management.

Private IT Tutor

2023 – Present

Self-employed · Damascus, Syria

- Privately tutored 100+ students as a self-employed instructor across 10+ subjects in software, programming, databases, and Flutter app development.
- Taught structured courses covering Flutter, Java (OOP), C++, data structures, algorithms, and database management, strengthening students' problem-solving and development skills.

PROJECTS

FitMind — Full-Stack Gym Management App (Flutter, Django)

- Built a full-stack gym management app with a Cubit-managed Flutter frontend structured in Clean Architecture, backed by a Django REST API.
- Developed three AI features — a workout-plan generator, photo-based calorie & nutrition scanning, and automated progress reports — focused on optimizing model accuracy and performance.

Gravity — Gaming Lounge Booking SaaS (React)

- Developing the React frontend for a SaaS platform enabling lounge owners to manage bookings and gamers to reserve sessions online, with responsive, component-based interfaces.

EDUCATION

B.Sc. in Information Technology

2022 – Expected 2027

Arabic International University · Damascus, Syria
